nonclassical logics an introduction ... - game theoretical semantics for some non-classical logics
paraconsistent logics are the formal systems in which absurdities do not trivialise the logic. in this paper, we give hintikka-style game theoretical semantics for a variety of paraconsistent and non-classical logics. for this purpose, we consider priest's logic of paradox, dunn's **anaphora and definite descriptions - springer** - anaphora and definite descriptions two applications of game-theoretical semantics d. reidel publishing company a member of the kluwer academic publishers group dordrecht/boston/lancaster . library of congress cataloging in publication data hintikka, jaakko, 1929- **a compositional game semantics for multi-agent logics of ...** - [hen61], and hintikka's game-theoretical interpretation of these, and continuing with the if-logic of hintikka and sandu [hs89, hs95, hs96]. the issue of whether and how a compositional semantics for if-logic can be given has been studied by several authors, particularly wilfrid hodge [hod97]. **hintikka's game-theoretical truth and if first-order logic ...** - hintikka's game-theoretical truth and if first-order logic as an alternative foundation of the link between sentences and models it is a research on the meaning of natural languages that has led me to investigate hintikka's game semantics, and its significance regarding the relationship between sentences and models. **a game semantics for system p - johannes marti** - dialogical games and game theoretic semantics is that lorenzen and lorenz adopt a proof-theoretical perspective whereas hintikka presupposes a model theory for the logic. a comparison of the two approaches can be found in [13]. the game semantics for system p developed in this paper is close to lorenzen and lorenz' dialogical games. **knowledge and its game-theoretical foundations: the ...** - semantics that, like in the dialogical framework, grounds the concepts of truth or validity on game-theoretical concepts, such as the existence of a winning strategy for a player, though differently to the dialogical framework it is build up on the notion of model.⁸ furthermore, hintikka combined the model-theoretical, the epistemic and the ... **games in the semantics of programming languages - an ...** - games in the semantics of programming languages 133 subsequently, this led in 1993 to the development of intensional game-theoretical models in the semantics of programming languages independently by abramsky et al.
